

Maxxam Cat 5e Solutions Overview

The Maxxam Cat 5e UTP cabling solution supports high speed applications such as 1G Ethernet and is backwards compatible to all preceding cabling categories, ensuring support of all applications designed to run over them. Category 5e cabling provides a cost effective solution that supports a multitude of applications and is suitable for many environments where there is unlikely to be a requirement to support 10G Ethernet in the short to mid-term or where there is likely to be a business relocation in the near future.

The Maxxam Cat 5e cabling solution has been designed to offer excellent transmission performance in an installed environment and uses components that are quick and easy to install. The Maxxam Cat 5e Keystone Jack can be terminated using traditional punch down tools or using the Maxxam Keystone Termination Tool. The Keystone Jacks can be mounted in patch panels and work area outlets, providing complete modularity throughout the cabling infrastructure.

With a range of cables, modular and PCB patch panels, work area outlets and patch leads Maxxam offers a solution for all network environments.
