

## Maxxam Cat 6 Solutions Overview

The Maxxam Cat 6 UTP cabling solution supports high speed applications such as 1G Ethernet and is backwards compatible to all preceding cabling categories, ensuring support of all applications designed to run over them. In the modern business environment many applications, including voice, data, video, security cameras, door access control and building management services, are designed to run over the IP network. It is the cabling infrastructure that is the foundation of any IP network and the Maxxam Cat 6 UTP cabling solution offers the performance and reliability to ensure that your network is built on a solid base.

The Maxxam Cat 6 cabling solution has been designed to offer excellent transmission performance in an installed environment and uses components that are quick and easy to install. The Maxxam Cat 6 Keystone Jack can be terminated using traditional punch down tools or using the Maxxam Keystone Termination Tool. It can even be terminated without the need for any tools other than a pair of side cutters. The Keystone Jacks can be mounted in patch panels and work area outlets, providing complete modularity throughout the cabling infrastructure.

With a range of cables, modular and PCB patch panels, work area outlets and patch leads Maxxam offers a solution for all network environments.
