Product Overview:

The Maxxam LC Extractor Patch Cords have been designed to facilitate the easy removal of patch cords in high density environments such as data centres and blade servers. The unique seesaw latch activation system requires the use of no special tools. Simply slide a thumb or finger between the latch and the cable sheath and the plug latches are depressed, enabling the plug to be easily removed.

The round cable design has an overall diameter of just 3.0mm which means that it takes up less space in cable management systems than conventional duplex patch cords, thus improving management and reducing congestion.

The polarity of the LC Duplex plug can be easily reconfigured on-site without the need for tools. The outer part of the plug body is simply unclipped and hinged downwards. The two plugs can then be swapped over and the body hinged back up until it clicks back in to place.
