- Choice of mounting options
- Range of fibre and keystone front plates available
- Accommodates up to 24 fibres
- Hinged lid for easy access
- Compact design
- Strong, steel construction
- Multiple cable entry points

### Product Overview:

The Maxxam Multi-purpose Fibre Enclosure provides a means of presenting fibre terminations in a wide variety of different scenarios, making it suitable for many different applications. The enclosure can be wall mounted using the slots provided in the base or it can be DIN rail or 10" rack mounted using the appropriate, optional, additional mounting kits. With front plates for ST, SC Duplex, LC Duplex and Keystone there is a solution for all applications, including mixed copper and fibre and multimedia.

Constructed from mild steel the Maxxam Multi-purpose Fibre Enclosure is rugged enough to be used in demanding environments such as factory floors or direct mounting on to surfaces where it might be knocked. The compact design makes it unobtrusive, the hinged lid provides easy access to the terminations and the multiple cable entry points can be fitted with a standard compression cable gland. The enclosure will accommodate a splice cassette if required.
